1 Introduction

Introduction to the L^AT_EX Template with Examples.

2 Questions

[FIXME: None yet...]

3 Examples

Series of useful L^AT_EX markup. Need to break out to separate examples.tex file.

3.1 Escaping < and > Symbols

To get $<$ or $>$ just wrap the symbols in $\$$ for math mode.

3.2 Enumerate

1. DNR - Alaska State Department of Natural Resources

- HI - Historical Index, not maintained since 1982
- LE - Land Estate, maintained by SGU
- ME - Mineral Estate, maintained by SGU

2. Alaska State Surveys

- ASBLT - As-Built Survey
- ASCS - Cadastral Survey

3.3 Comments

COMMENTS Comment — *Sean Weems, Spring 2003*

We should get the COMMENTS column searchable via the landrecords application before we do much anything else – shouldn't be too hard.

Errata: Plats spanning multiple sections

A few anomalies can be observed in the AKPLATS table. Specifically plats exist that span multiple sections. Since the table only has a single column, SCODE, that accepts a single section code, SGU (Status Graphics Unit) has handled this problem by entering multiple rows in the table, each with a different section that point to the same plat or file. Multiple section plats are indicated by setting the TCODE column to the value 37, and making an appropriate notation like *Section 24-25-26-27* in the REMARKS column.

[FIXME: Perhaps the SCODE column should accept an array of sections?]
